NEW...ready for you NOW...
KODAK Radiograph Duplicating Film

Now Kodak offers you a quick, easy, convenient—and inexpensive—way to get same-size, same-tone copies of radiographs.

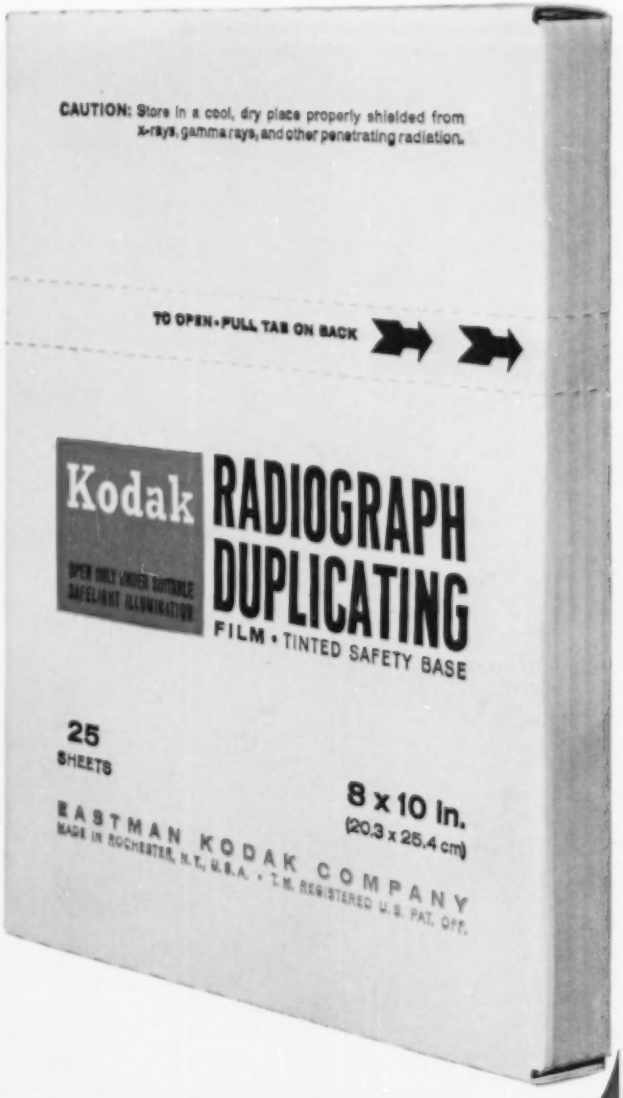
KODAK Radiograph Duplicating Film reproduces tone gradations with excellent fidelity. It can be exposed in seconds in a simple printing frame or automatic exposure equipment and processed right along with other Kodak medical x-ray film in any medical model KODAK X-OMAT Processor with KODAK X-OMAT Chemicals. It can also be processed manually with conventional x-ray film processing equipment.

KODAK Radiograph Duplicating Film fills many important needs

1. **Duplicates** of significant radiographs can be included with reports to referring physicians.
2. **Duplicates** can accompany patients' records when they move to other localities.
3. **Duplicates** can be made of valuable and irreplaceable radiographs.
4. **Duplicates** can be used in scientific and educational exhibits to avoid damage to, or loss of originals.
5. **Duplicates** can be invaluable to residents in radiology—personal copies for study and reference.
6. **Duplicates** can be invaluable to x-ray technology students—examples of good diagnostic quality and technic and examples showing technical errors.

Also KODAK Radiograph Duplicating Film can be used for making lantern slides.

KODAK Radiograph Duplicating Film —with rounded corners—is available in 8 x 10, 10 x 12 and 14 x 17 sheets, in 25-sheet packages. Order now from your Kodak x-ray dealer.



CAUTION: Store in a cool, dry place properly shielded from x-rays, gamma rays, and other penetrating radiation.

Mount Kilimanjaro, Africa. Photo by Emil Schulthess

Pentothal is one of the few names recognized almost everywhere that medicine is practiced.

412-184

SAFER & QUICKER MENISECTOMIES

WITH BOWEN INSTRUMENTS

128 Grover Meniscotome, cutting edge on entire inside of ring

128V Grover Meniscotome, V-Cutting only inside of ring

128T Grover Meniscotome, Top cutting only inside of ring

GROVER MENISECTOME

Designed like a large intra-uterine curette, the Grover Meniscotome is designed in three types. All three types present a smooth rounded guard on the outer surface of the ring. In the first type (No. 128), the inner margin of the ring is a keen knife edge all around permitting cutting in any direction and the entire cartilage can be removed in one piece with this one type Meniscotome. The second type (No. 128 V) has the cutting edge in the V-groove part of the ring only and is used to cut the cartilage free until it can be dislocated into the notch. The third type (No. 128 T) has the cutting edge on the upper inside portion of the ring and is used by slipping the cartilage through the ring, pushing the ring back over the posterior horn and continuing the cutting of the cartilage by drawing the Meniscotome towards the operator.

No. 108 Smillie Cartilage Curved Set

No. 108-1 Cartilage Knife, Curved Right

No. 108-2 Cartilage Knife, Curved Left

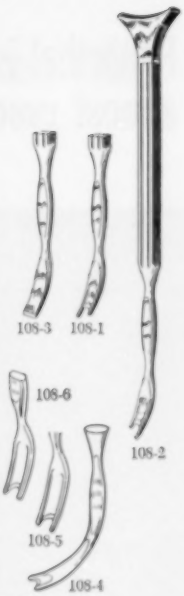
No. 108-3 Cartilage Chisel, Curved

No. 108-4 90° Cartilage Knife, Regular Width

No. 108-5 Cartilage Knife, Curved Extra Wide

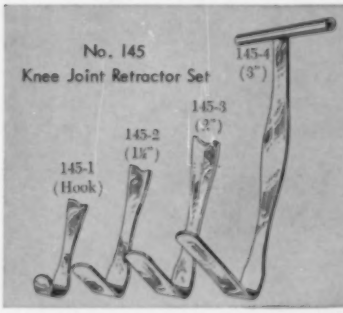
No. 108-6 90° Cartilage Knife, Extra Wide

No. 128MS Hone for Smillie Knives



SMILLIE CARTILAGE SET

Designed with handles that do not obscure field of vision. Longer back always rests on tibial table. Beaked knife divides the peripheral attachments of the medial meniscus. Also divides the central attachment of the posterior horn of the lateral meniscus. Second beaked knife used for the same purpose, also to divide the central attachment of the posterior horn of the medial meniscus. Chisel mobilizes middle third of the meniscus.

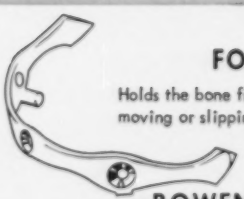


SMILLIE KNEE JOINT RETRACTOR SET

(STAINLESS STEEL)

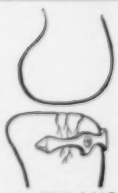
The angles of the blades and the modified handles of these retractors have been altered to give a better grip and keep the fingers away from the incision. They are exceptionally well designed for the removal of minisci and for use in practically all knee joint operations. The set of four comprises one hook and three with blade lengths from 1 1/2 inches to 3 inches.

FEATURES: "Sure grip handles for perfect control." "Hardened and tempered to rigid specifications." "Useful retractors for many other surgical procedures."



TIBIAL PLATEAU PLATE FOR EXPLOSION-TYPE FRACTURE

Holds the bone fragments together and stabilized by the projecting tabs to prevent moving or slipping. Held in place by one or two bone screws or a tibial bolt. Bending irons can be used to adjust the radius as required. Made of SMO stainless steel.



BOWEN & COMPANY, INC. P.O. BOX 5818 BETHESDA, MARYLAND
